ADMIT-LIPA:
A WEB-BASED ADMISSIONS CUSTOMER RELATIONSHIP MANAGEMENT SYSTEM FOR THE ADMISSIONS OFFICE OF STI COLLEGE LIPA

STI College Lipa
C. M. Recto Avenue, Barangay 6, Lipa City, Batangas
School of Information and Communications Technology

Prototype Progress Report

Presented in Partial Fulfillment of the Requirements in
Application Development and Emerging Technologies

Submitted by the Proponents:
Atienza, Kurt Judd P.
Garonia, Ian Humprey M.
Apura, Alexis H.
Tenedo, Francis Gerald G.

Submitted to:
Ms. Gabrielle Hernandez
Course Facilitator

First Semester, School Year 2026-2027
Report date: October 28, 2026

1. Summary of Progress

The proponents moved ADMIT-Lipa from the approved System Concept Proposal to a working web application. All fourteen use cases in the use-case diagram (Figure 1 of the proposal) now run end to end in the development build, and the automated acceptance suite passed 52 of 52 checks on October 28, 2026. Every functional requirement FR-01 to FR-14 is exercised by at least one check that follows the verification method written in the proposal.

Item	Status as of October 28, 2026
Use cases implemented	14 of 14 (UC1 to UC14)
Functional requirements verified by automated test	14 of 14 (FR-01 to FR-14)
Non-functional requirements verified by automated test	NFR-02, NFR-03 (in part); NFR-05 by screenshot at 390 px
Screens designed and captured	13 screens, desktop (1920 x 1080) and mobile (390 x 844), light and dark
Source code	https://github.com/Tiredicey/APPDEV
Deployment	Runs in the development environment; public hosting on Cloudflare Pages is the next step

2. Technology Used

Layer	Choice	Reason
Server	Hono web framework on Cloudflare Workers / Pages	Runs at the network edge; no server for the campus to maintain
Database	Cloudflare D1 (SQLite)	Relational tables for tickets, requirements, payments and the audit log; Cloudflare states D1 encrypts data at rest and in transit (Cloudflare, 2026)
Field encryption	AES-256-GCM via the Web Crypto API	Date of birth, mobile number, address and financial-aid answers are encrypted before they reach the database (NFR-03)
Passwords	PBKDF2-SHA-256, 100,000 iterations, per-user salt	No plain-text passwords stored
Front end	Plain JavaScript single-page app, IBM Plex type, no framework	Small download for mobile users on slow connections
Development assistant	Genspark AI coding agent	Generated code, tests and the background video under the proponents' direction; the team reviewed the screens and tested the prototype

3. Requirement Traceability: What Was Built and How It Was Verified

Req.	Use case	Implemented behavior	Result
FR-01	UC1	Inquiry form returns a ticket number such as ADM-2026-00001 in the same session and stores it	PASS
FR-02	UC2	Second profile with the same surname, first name and date of birth is blocked with a message (keyed HMAC index, so the duplicate check works on encrypted data)	PASS
FR-03	UC3	Each required document shows received, pending or rejected; a rejection requires a reason	PASS
FR-04	UC4	TES, TES-3A, TDP and SHS Voucher flagged from the encoded profile; boundary tested at P400,000 and P400,001	PASS
FR-05	UC5	Applicant sees own stage only; opening another record returns "forbidden"	PASS
FR-06	UC6	Elapsed working days computed against the 3 / 7 / 20-day tiers, excluding weekends and holidays entered by the administrator	PASS
FR-07	UC7	Volume, stage conversion and case aging for any date range; totals reconcile with the raw case list; CSV export	PASS
FR-08	UC8	Consent statement text, timestamp and purpose stored for every inquiry and application; no consent, no record	PASS
FR-09	UC9	Reservation fee validated only with an official receipt number; a receipt number cannot be reused	PASS
FR-10	UC10	Deficiency notice lists each document still pending after its deadline; repeat runs do not duplicate notices	PASS
FR-11	UC11	Endorsed case reaches the financial aid coordinator queue with the program document list	PASS
FR-12	UC12	Opening a record requires a stated purpose; user, record, time and purpose are logged; applicants can download their own access log	PASS
FR-13	UC13	Ticket owned by one named officer; cannot be resolved without a closing remark	PASS
FR-14	UC14	Overdue ticket raised to the School Administrator queue; on-time tickets are not	PASS

4. Screens

The screens below were captured from the running build with an automated browser. The landing page uses the 1921 x 1080 "Landing Page" frame and its #FFF5C3 fill from the team Figma file as its base.

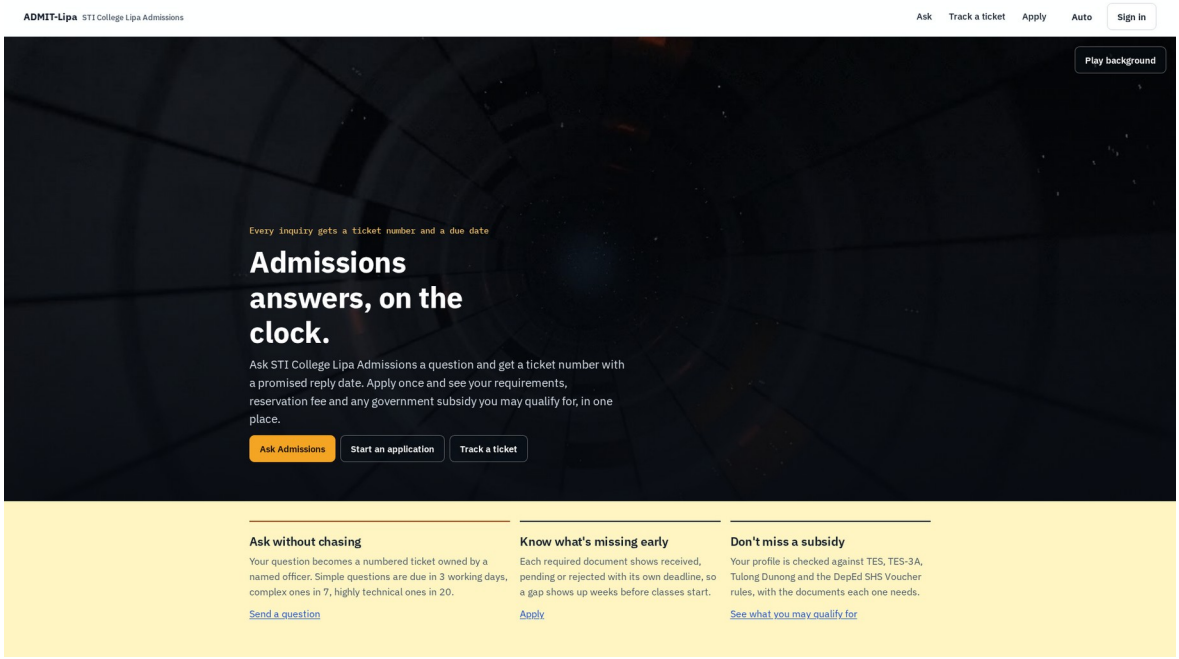

Figure 2. Landing page with the looping background video (desktop).

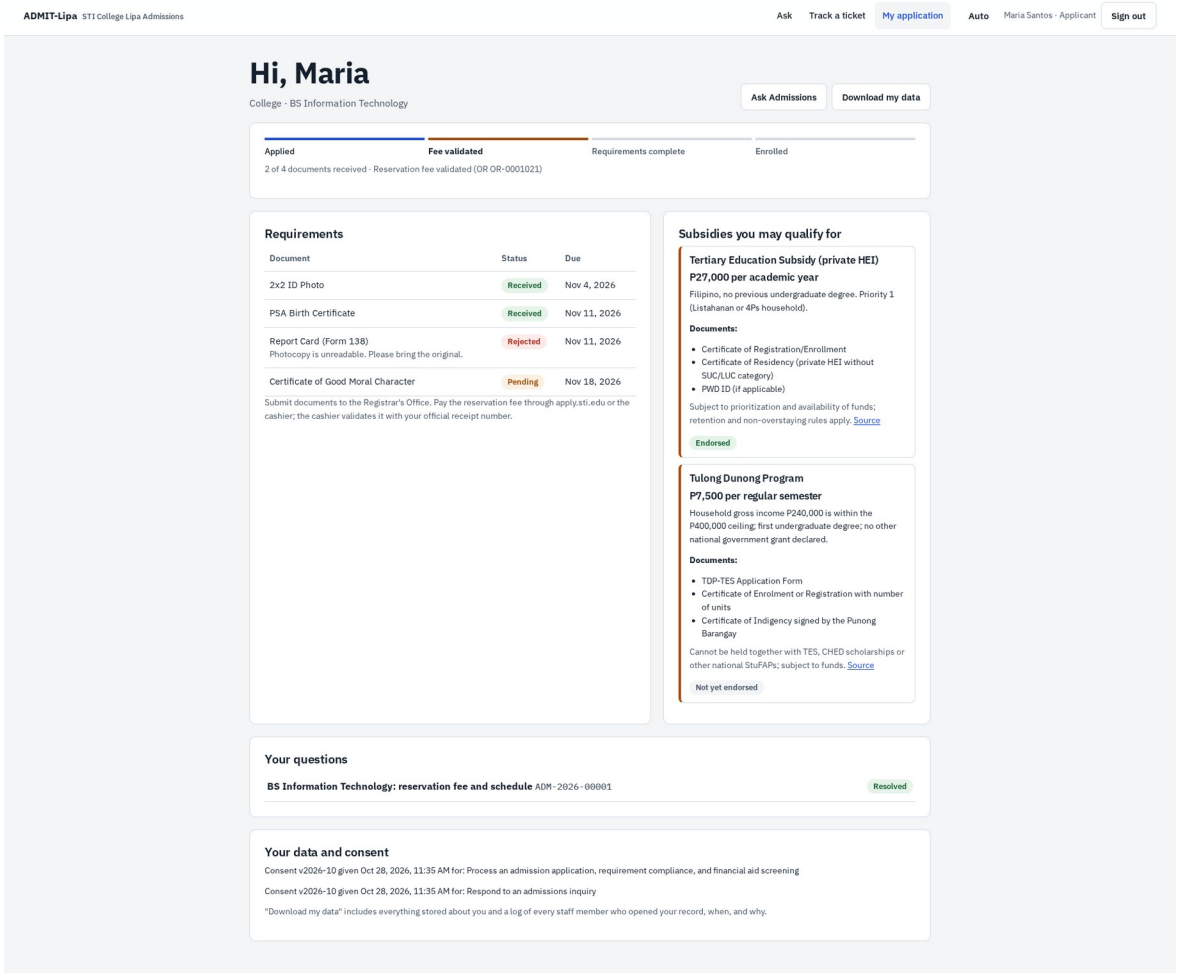

Figure 3. Applicant dashboard: stage, requirements, subsidy matches, questions, consent (UC3, UC4, UC5, UC8).

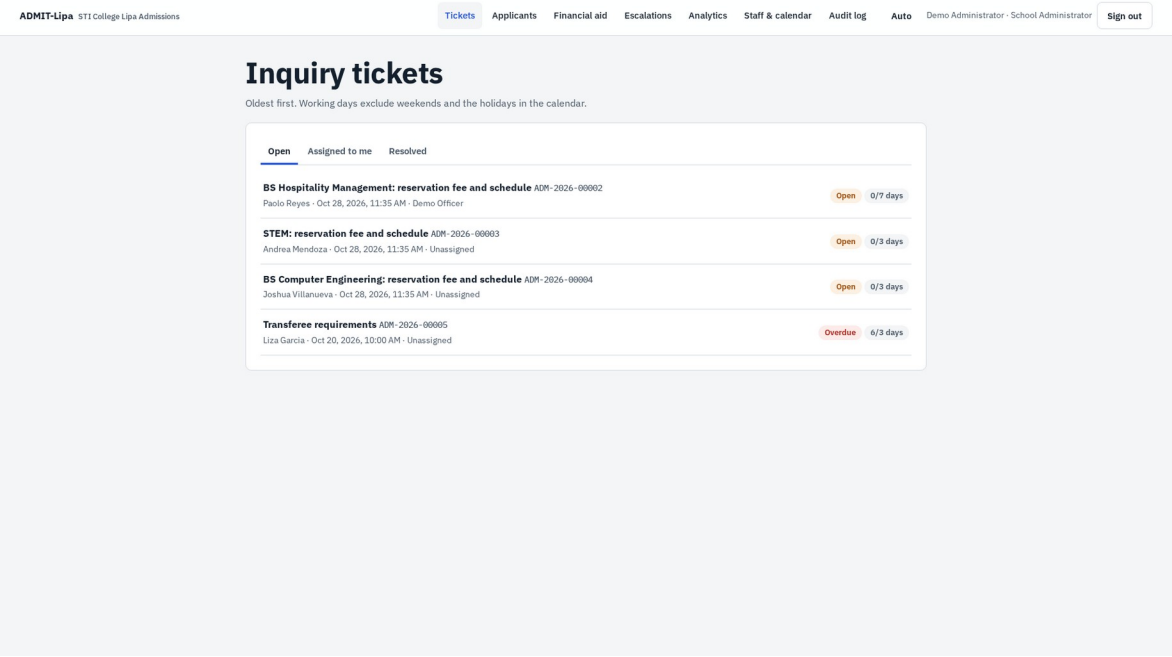

Figure 4. Officer ticket queue with service-level clock (UC6, UC13).

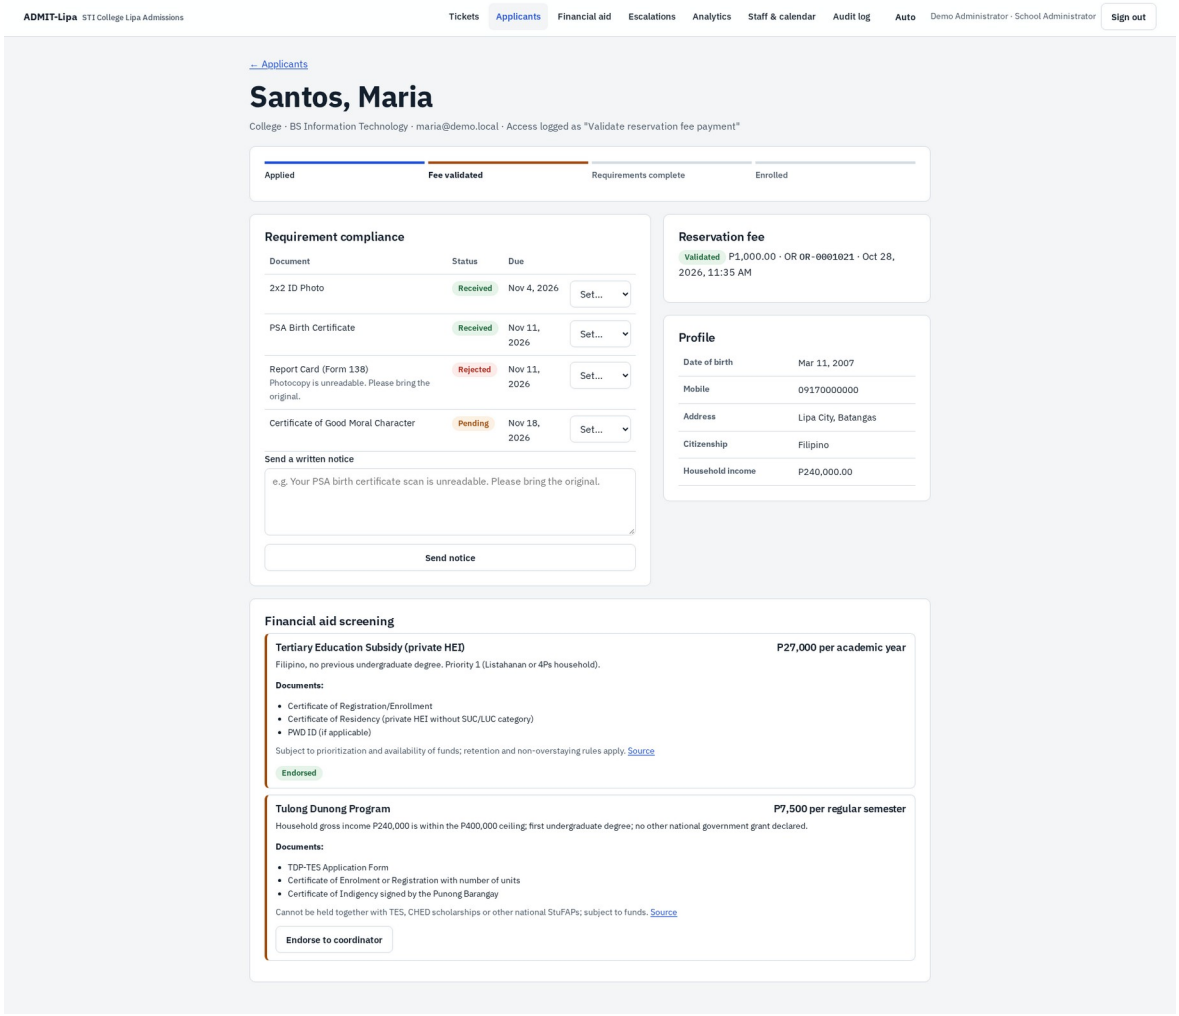

Figure 5. Staff view of an applicant record: compliance, payment, aid endorsement (UC3, UC9, UC10, UC11).

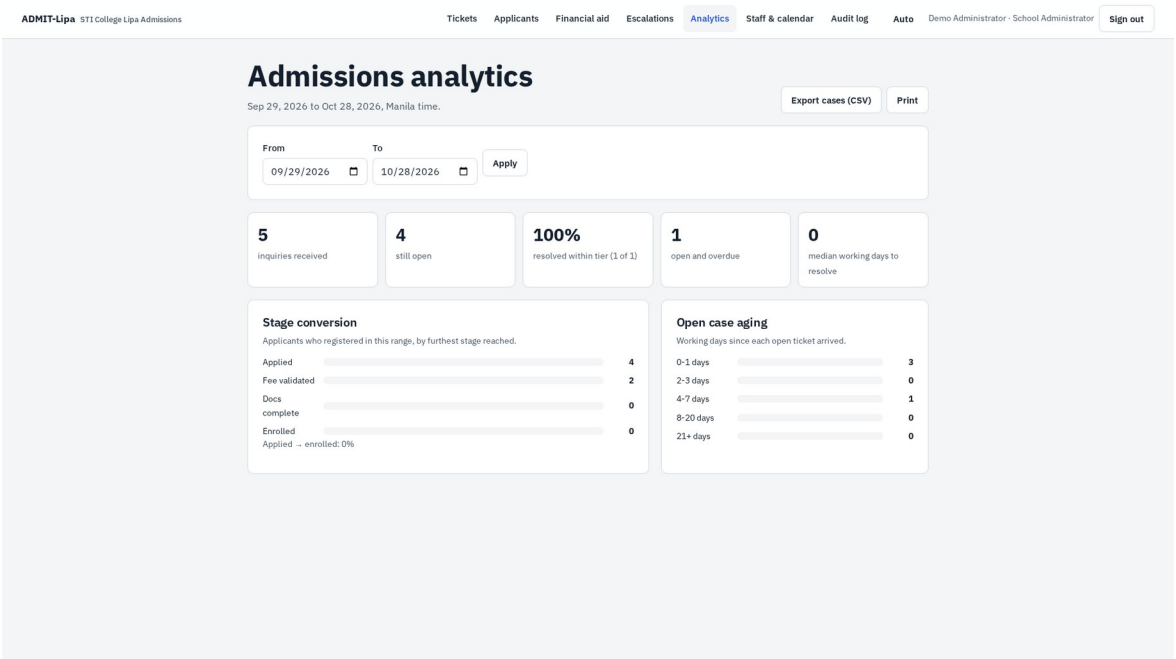

Figure 6. Admissions analytics for the School Administrator (UC7).

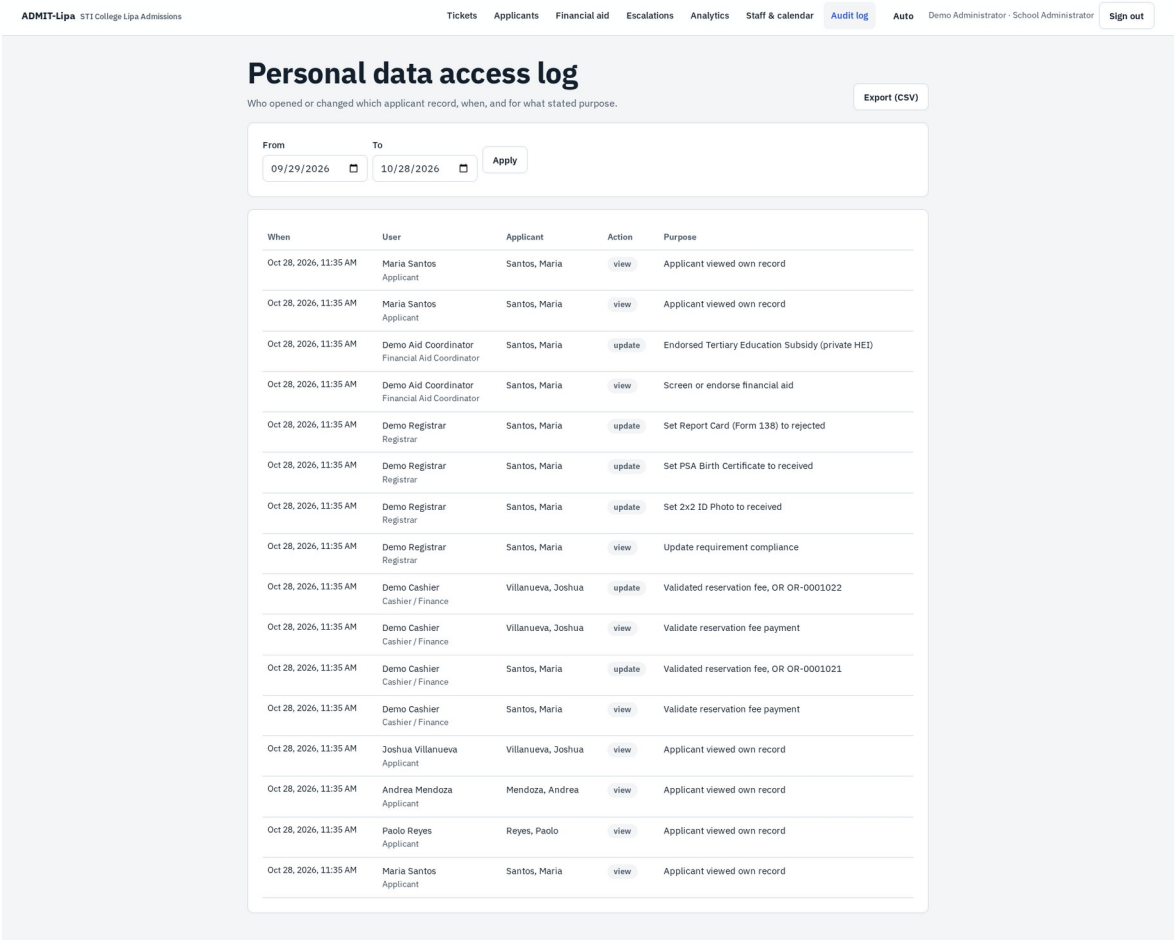

Figure 7. Personal data access log for the Data Protection Officer (UC12).

5. Background Video

The landing page plays a 12-second seamless loop at 30 frames per second, 1280 x 720, 6.3 MB, H.264. It shows a slow fall down the core of an abandoned orbital station. Camera speed and the amber warning lamps pulse at 140 beats per minute. The largest frame-to-frame brightness change is {video["max_delta"]:.2f} of 255 levels, far below the WCAG 2.3.1 flash threshold. The video is muted, carries no information, and has a Pause control. It does not autoplay for visitors who set "reduce motion" on their device.

6. Member Contributions

Each member signs his own row to confirm the contribution listed.

Member	Role	Contribution	Signature
Atienza, Kurt Judd P.	Project Lead	Designed the landing frame in Figma; directed the AI-assisted build of the back end, database and test suite; integrated and tested the prototype	
Garonia, Ian Humprey M.	UX/UI Designer and Tester	Designed screens in Figma; tested the prototype	
Apura, Alexis H.	UX/UI Designer and Tester	Designed screens in Figma; tested the prototype	
Tenedo, Francis Gerald G.	UX/UI Designer and Tester	Designed screens in Figma; tested the prototype
